More details about risks

We work only with the safest exchanges, which have proven themselves for years and occupy leading positions in the market. Nevertheless, even for such large and reliable players, there are still risks of hacking, for which we cannot be held responsible.

From our side, we provide the highest level of competence and safety.

To minimize risks on the part of the exchanges themselves, we created an additional insurance fund.

Insurance is not mandatory and every investor can contribute any amount at will. The funds of the insurance fund are not stored on exchanges, do not participate in trades and are not used throughout the investment period.
